

## Lab Analysis Webinar Description

Drinking water and wastewater has to be tested to ensure that it is safe for us and the environment. Lab personnel are often working with little background in lab work and need help developing good procedures.

Testing is the key to compliance and good operations. The purpose of this course is to learn proper procedures and common problems associated with testing for various analytical parameters. We will cover how to take samples, how to write procedures, and how to troubleshoot lab testing. We will discuss conventional test procedures, cover common problems, and perform basic lab calculations. The most important aspect of lab work is consistency which is impossible if we do not have good procedures. Learn how to make your procedures better.
