

Lift Station O & M Webinar Description

Lift stations are integral to collection systems. Without their proper operation, there would be more frequent sewer overflows, more noxious odors, increased corrosion, increased maintenance, and higher life cycle costs.

From FOG to flushable wipes, our lift stations face one of the most challenging wastewater environments. They also are frequently undermanned, so it is imperative that we develop the right techniques and procedures to keep them running. Course covers chemical & biological treatment of FOG, grinder pumps & flushable wipes, proper float settings & maintenance, odor & corrosion prevention, and pump & motor troubleshooting & maintenance. Learn how to take control of lift stations by monitoring & fixing them before they fail.
